HAMZA NIZAR

Electrical Engineer | PV plants, HV substations, project planning (Primavera P6)

nizarh393@gmail.com | +216 28 413 567 | **LinkedIn** | **GitHub**

PROFILE

Electrical Engineer graduated from the National Higher School of Engineers of Tunis (**ENSIT**), currently at **EnerNetPro** working on **10 to 500 MWp solar PV plants** and **HV substations**. My work covers **project planning and controls** (PMO, Primavera P6), **engineering deliverables management** as Independent Engineer (IE), **pre-feasibility and PPA studies**, **substation design** (SLD, layout) and **PV sizing**. Rigorous and results-driven, with a strong background in control engineering and embedded systems.

PROFESSIONAL EXPERIENCE

EnerNetPro — *Kram, Tunis*

Electrical Engineer — *Nov 2025 - Present*

GFR-Puro: 100 MWp solar PV plant — *Nov 2025 - Ongoing*

PMO Planner

- Development and control of the project schedule in **Primavera P6**: baseline, progress updates, critical path and float analysis.
- Progress reporting for the PMO and variance tracking against the baseline.

Scatec, Sidi Bouzid: 100 MWp PV plant and upgrade of a 225/150 kV substation — *May 2026 - Ongoing*

Deliverable Owner, EnerNetPro acting as Independent Engineer (IE)

- Review of PV plant and 225/150 kV substation engineering deliverables (calculation notes, drawings), drafting and follow-up of comment resolution sheets (**CRS**).
- Deliverables register follow-up and coordination with the client and the EPC contractor through to approval.

TTE-Saddada: 500 MWp solar PV plant — *Jul 2026 - Ongoing*

PPA study and substation design

- Contribution to the project's **PPA** (Power Purchase Agreement) study.
- Substation design: single line diagram (**SLD**) and **layout** drawings in **AutoCAD**.

MediS: 10 MWp solar PV plant — *May 2026 - Ongoing*

Pre-feasibility study

- Pre-feasibility study of a 10 MWp PV plant for a special purpose vehicle (**SPV**).

Other studies

- **PV plant sizing** studies.
- Calculation notes for **overhead transmission lines (OHTL)**.

Personal Projects — *Open source and software development*

Planning and AI tools — *Oct 2026 - Present*

MCP for Primavera P6: open-source MCP server (v2.0.0) — *Oct 2026*

Python, published in the official MCP Registry and on **GitHub**

- Local server connecting Claude, ChatGPT, Cursor and VS Code to **Primavera P6** schedules (P6 database or **XER** files).
- Computed analyses: critical and driving path, float, **DCMA 14-point check**, baseline comparison, CPM what-if, **Monte Carlo** schedule risk and an Excel dashboard.
- Safe write-back to the P6 database: preview, confirmation, backup first and edit log. Windows installer.

Qantara: project scheduling application (in development) — *Oct 2026 - Ongoing*

Desktop (Windows, macOS) and web app: TypeScript, React, Tauri 2 (Rust)

- Reads and writes Primavera P6 (XER, P6 XML, P6 database) and MS Project (XML, .mpp) data, with an Activities view (table and Gantt chart).
- Scheduling engine designed to reproduce P6 dates and float, checked by automated parity tests; dashboards, reports and an AI assistant.

e-MBS — *Lac 2, Tunis*

Final-year engineering internship — *6 months, 2025*

- Design and development of a **smart energy storage system** for street lighting and for residential and industrial storage.
- Design of an **IoT board** connected over 4G to an **MQTT** broker to send and receive data.
- Tools: SIM7600E, LTspice, MicroPython, KiCad, RP2040 (Raspberry Pi Pico H).

STM *Medjez el Bab, Béja*

Technician internship *2 months*

- Reinstallation of the electrical cabinet of a concrete mixer and improvement study to automate the system.

SNB Group (SFBT) *Mornaguia, Manouba*

Worker internship *1 month*

- Assisted the maintenance team on corrective and preventive interventions.

SKILLS

Power and renewables: PV plant sizing, pre-feasibility studies, PPA studies, HV/MV substation design (SLD, layout), overhead line (OHTL) calculation notes, engineering deliverables review (CRS).

Project management: Primavera P6, MS Project, baseline scheduling, progress tracking, critical path, PMO reporting, deliverables management.

CAD: AutoCAD (SLD, layout drawings), KiCad.

Automation and embedded: TIA Portal, WinCC, Ignition, STM32 (CubeIDE, CubeMX, Keil), ESP, Raspberry Pi, DSP, MATLAB/Simulink, LabVIEW.

Programming: C, C++, embedded C, Python, MicroPython, TypeScript, React, Rust (Tauri), Git.

Languages: English (B2), French (B2).

EDUCATION

National Higher School of Engineers of Tunis (ENSIT) *Sep 2022 - Jun 2025*

Engineering degree in Electrical Engineering, control and industrial computing

National Higher School of Engineers of Tunis (ENSIT) *Sep 2024 - Jun 2025*

Research Master's in Industrial Signal and Advanced Control (SIAA)

Preparatory Institute for Engineering Studies of Tunis (IPEIT) *Sep 2020 - Jun 2022*

Preparatory classes, Mathematics and Physics

ACADEMIC PROJECTS

Ball balancing table (2nd-year project): Raspberry Pi 4 system with camera-based position tracking, modelling and simulation (MATLAB/Simulink), real-time control (Python).

Inverted pendulum (1st-year project): modelling, simulation (MATLAB/Simulink) and hands-on implementation, PID and LQR control.

Industrial automation: crimping and labelling stations in TIA Portal (S7-1200), Ethernet and Profibus communication, Ignition SCADA.

ECG signal processing: real-time filtering, feature extraction and analysis on a TMS320F28335 DSP (Code Composer).

STM32 (register-level programming): robot control via USART, TIMER and PWM; sensor acquisition (I2C, ADC) and data transfer to a remote server via ESP8266 (Keil, embedded C).

INTERESTS

Renewable energy and innovation: energy transition, embedded systems and industrial automation.

Personal projects: building robots and connected systems.
